Resume that
can get you
into Google!

TEMPLATE
LINK GIVEN

The title's more than enough and without wasting your time here's the template link for your to download and edit as per your needs:

Resume template — Click here

(Note : To make your own changes in the resume, do not ask me editor permission. Just create a copy of the resume by clicking 'Make a copy' from the file section and it will create a fresh copy and you will be able to edit it for yourself.)

If you still want to learn more what makes this resume template so special despite its ordinary looks —

- 1. Keep it one pager like mine:** Employers receive a large number of resumes, and many of them will be quickly skimmed over. Keeping your resume to one page makes it easier for the hiring manager to quickly see your relevant skills and experience. Be concise, and prioritize your most important achievements and experiences.
- 2. Summary is optional:** While a summary can be useful in some cases, it's not always necessary. If you do choose to include a summary, make sure it's brief and highlights your most relevant skills and experience. If you have a clear and targeted objective statement, that may be enough.

3. Having a **GitHub profile** can be a great way to showcase your coding skills and experience, but if you don't have one, there are other options. **LeetCode** or other coding platforms can be a good way to demonstrate your coding skills, as well as any contributions you've made to open-source projects.
4. Describe your work contribution with measurable data to show the impact.

PRO TIPS TO KEEP IN MIND:

Tip 1: Research the Company

The first step to creating a successful resume for Google is to research the company. Start by checking out Google's website to get an idea of the company's mission and values. You can also check out the company's social media accounts, news articles, and press releases to get a sense of what the company is all about.

Tip 2: Tailor Your Resume to the Job

Once you have a good understanding of the company, it's time to tailor your resume to the specific job you're applying for. Look at the job posting and make a list of the skills and qualifications required for the position. Then, make sure your resume highlights those skills and qualifications.

Tip 3: Use Action Words

When writing your resume, use action words to make your achievements and responsibilities stand out.

For example, instead of saying "Managed a team of developers," say "Led a team of developers to successfully deliver a complex software project on time and under budget."

Tip 4: Highlight Your Achievements

One of the most important things to include on your resume is your achievements. Instead of just listing your responsibilities, highlight what you accomplished in each position. For example, if you increased sales by 25% in your last job, make sure to mention that.

Tip 5: Keep it Clean and Simple

When it comes to formatting your resume, keep it clean and simple. Use a professional font, such as Arial or Times New Roman, and avoid using too many colors or graphics. Google is known for its simple and clean design, so make sure your resume reflects that.

Remember, your resume is your chance to make a strong first impression, so make sure it's tailored to the job you're applying for, highlights your most relevant skills and experience, and clearly demonstrates the impact you've made in your previous roles. Good luck with your job search!

DO THIS OR I WILL BE SAD 🙄

While you are perfecting your resume its important that you keep your coding skills healthy. Here is a list of Leetcode blind 75 questions to quickly prepare you for any kind of coding interview question — [Blind 75 LeetCode Questions](#).

Hope you enjoyed going through the article. You can follow me to get the latest update when I upload more such amazing article.

If you got to learn something valuable from this article and clap and follow me if you found it helpful.
